

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (currently amended) A method of providing localized information to a user accessing an internet site through an access point, comprising:
  - a. determining an address corresponding to the access point;
  - b. obtaining location information corresponding to the address from a location table, wherein the location information is determined at an internet portal based on the location table;
  - c. obtaining the localized information using the location information; and
  - d. providing the localized information to the user through the access point.
2. (original) The method as claimed in claim 1 wherein the address is an internet protocol address.
3. (currently amended) The method as claimed in claim 1 further comprising generating an entry in the location table including the address and the corresponding location information.
4. (original) The method as claimed in claim 3 further comprising obtaining the corresponding location information from the access point.
5. (original) The method as claimed in claim 1 wherein the localized information includes one or more of weather, news, traffic information and information regarding nearby points of interest.

6. (original) The method as claimed in claim 1 wherein the internet site is provided by an internet server.
7. (currently amended) The method as claimed in claim 1 wherein the internet site is provided by an the internet portal.
8. (original) The method as claimed in claim 1 wherein the localized information is obtained from a localized information database.
9. (currently amended) A method of generating a location table corresponding to locations of access points, comprising:
  - a. obtaining an address of one of the access point points from a communication received from one of the access point points;
  - b. obtaining location information corresponding to a physical location of one of the access point points, wherein the physical location is determined at an internet portal;
  - c. generating an entry within the location table including the address and the location information; and
  - d. repeating a-c for a first communication from each of the access point points.
10. (original) The method as claimed in claim 9 wherein the address is an internet protocol address.
11. (original) The method as claimed in claim 9 wherein the communication is received at an internet site.

12. (original) The method as claimed in claim 11 wherein the internet site is provided by an internet server.

13. (currently amended) The method as claimed in claim 11 wherein the internet site is provided by ~~an~~ the internet portal.

14. (currently amended) An apparatus to provide an internet site and capable of being accessed through an access point comprising:

- a. a location table including a plurality of entries each having an address and location information corresponding to ~~an~~ the access point; ~~and~~
- b. a localized information database coupled to the location table to provide localized information based on the location information; and
- c. a controller coupled to the location table and the localized information database for determining the location information based on the location table.

15. (original) The apparatus as claimed in claim 14 wherein the address is an internet protocol address.

16. (currently amended) The apparatus as claimed in claim 14 ~~further comprising a controller coupled to the location table and the localized information database for generating~~ wherein the controller generates an entry in the location table including the address and the corresponding location information.

17. (original) The apparatus as claimed in claim 16 wherein the controller obtains the location information from the access point.

18. (original) The apparatus as claimed in claim 14 wherein the localized information includes one or more of weather, news, traffic information and information regarding nearby points of interest.

19. (original) The apparatus as claimed in claim 14 wherein the apparatus is within an internet server.

20. (currently amended) The apparatus as claimed in claim 14 wherein the apparatus is within ~~an~~ the internet portal.

21. (currently amended) An apparatus for providing an internet site and capable of being accessed through an access point comprising:

- a. a first means for maintaining a plurality of entries each having an address and location information corresponding to ~~an~~ the access point; ~~and~~
- b. a second means for maintaining a localized information database coupled to the first means for maintaining and for providing localized information based on the location information; and
- c. a controlling means coupled to a location table and the localized information database for determining the location information based on the location table.

22. (original) The apparatus as claimed in claim 21 wherein the address is an internet protocol address.

23. (currently amended) The apparatus as claimed in claim 21 ~~further comprising a means for controlling coupled to the first means for maintaining and to the second means for maintaining for generating~~ wherein the controlling means generates an entry in the first means for maintaining including the address and the corresponding location information.

24. (original) The apparatus as claimed in claim 23 wherein the means for controlling obtains the location information from the access point.

25. (original) The apparatus as claimed in claim 21 wherein the localized information includes one or more of weather, news, traffic information and information regarding nearby points of interest.

26. (original) The apparatus as claimed in claim 21 wherein the apparatus is within an internet server.

27. (currently amended) The apparatus as claimed in claim 21 wherein the apparatus is within ~~an~~ the internet portal.

28. (currently amended) A location table maintained by an internet site for providing localized information to users through an access point comprising a plurality of entries, wherein a controller is associated with the internet site for determining location information based on the location table, each entry including:

- a. an address corresponding to the access point; and
- b. location information corresponding to the access point.

29. (original) The location table as claimed in claim 28 wherein the address is an internet protocol address.
30. (original) The location table as claimed in claim 28 wherein the internet site is provided by an internet server.
31. (currently amended) The location table as claimed in claim 28 wherein the internet site is provided by ~~an~~ the internet portal.
32. (original) The location table as claimed in claim 28 wherein the location information is a physical location of the access point.
33. (currently amended) A network of devices comprising:
- a. one or more access points to provide access to an internet site;
  - b. one or more internet access systems, each capable of communicating with the one or more access points to access the internet site through one of the access ~~point~~ points;
  - c. an apparatus to provide the internet site and capable of being accessed through the one or more access points comprising:
    - i. a location table including a plurality of entries each having an address and location information corresponding to an appropriate one of the access points; and
    - ii. a localized information database coupled to the location table to provide localized information based on the location information,  
wherein the location information is determined at the apparatus based on the location table.
34. (canceled)

35. (original) The network of devices as claimed in claim 33 wherein the one or more internet access systems are one or more of a portable computer, a cellular telephone and a personal digital assistant device.
36. (original) The network of devices as claimed in claim 33 wherein the address is an internet protocol address.
37. (currently amended) The network of devices as claimed in claim 33 wherein the apparatus to provide the internet site further comprises a controller coupled to the location table and the localized information database for generating an entry in the location table including the address and the corresponding location information after receiving a first communication from an one of the access point points.
38. (currently amended) The network of devices as claimed in claim 37 wherein the controller obtains the location information from one of the access point points.
39. (original) The network of devices as claimed in claim 33 wherein the localized information includes one or more of weather, news, traffic information and information regarding nearby points of interest.
40. (original) The network of devices as claimed in claim 33 wherein the apparatus to provide the internet site is within an internet server.
41. (currently amended) The network of devices as claimed in claim 33 wherein the apparatus to provide the internet site is within an the internet portal.
